Brief description: "Date": use the given format. "Grafana Code": If you install a new logger, fill in the Grafana code in the "Launch" column. If a logger is already installed, check the Grafana code of the logger against the one on this sheet. Make a check mark if it matches, otherwise write down the Grafana code in the "End" column. "Photography": If you have taken new photos, then write the UTC+2 (summer time) time stamp in the corresponding column (SVF = Sky View Factor, CP = Cardinal Points (N, E, S, W), LOC = Location). "Solar Panel": If you are installing a solar panel, check whether it is a normal (SPN) or large panel (SPL). If you have changed anything, be sure to sign the sheet. If you have only changed something on the front page, sign the sheet anyway and note the changes in the notes section on the front page.
